CASE STUDY

THE CHALLENGE

- 
- The highly contaminated diesel fuel in the field tankers was being transferred directly to the units, affecting their performance.
- Severe breakdowns and frequent shutdowns due to engine and injector failures.
- Significant technical and economic damage that impacted their productivity and performance.

THE SOLUTION

FMS-1/25-P and FMS-W25-A filters installed in series on the dispenser nozzle and in field tankers.

RESULT: Ultra clean and dry diesel – ISO 4406: 11/8/7

The benefits of FMS are substantial and important for the company, which is why we have approved the installation of FMS International Inc. systems at the Muelle and El Bosque farms."
