

HEAVY TRANSPORT

**CASE STUDY**

**TRAXIÓN**  
VIDA EN MOVIMIENTO

# THE CHALLENGE

- High contamination in diesel fuel with particles and water
- Severe and frequent failures in engines and injectors
- Significant technical and economic losses that affected productivity and performance

# THE SOLUTION

FMS premium filtration at the fuel reception point (25,000 liters per day) and at the outlet of the storage tank supplying fuel to the equipment.

**RESULT: Ultra clean and dry diesel – ISO 4406: 11/8/7**

Ultra-Clean Diesel ISO 4406 is the technology recommended by engine manufacturers. It offers technical benefits such as higher efficiency and reduced engine wear; economic benefits by lowering fuel consumption, reducing maintenance costs, and improving productivity; and environmental benefits through decreased pollutant emissions. It has no competition and is a global trend that is here to stay.”

Ing. Fidel Olguín,  
Corporate Operations Manager.
