# THE SOLUTION

Teknova, in collaboration with FMS, implemented the diesel filtration system for on-site fuel consumption, installing it across three Agroservas branches. This system controls particle and water content in the fuel to meet the levels required by engine manufacturers, ensuring optimal fleet performance and enabling the company to maintain modern equipment in excellent operating condition.

**RESULT: Ultra clean and dry diesel – ISO 4406: 11/8/7**

With FMS, we have significantly reduced maintenance processes and improved the efficiency of our machinery. The modern Euro V equipment with after-treatment systems has had no issues since we began filtering the fuel. The FMS filtration process fully protects us from fuel with high levels of water and particles."

Eng. José Ángel Castillo,  
Maintenance Manager, Agroreservas
